

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1. (original) A pharmaceutical composition comprising as active ingredients an anti-IgE antibody and at least one further antiallergic compound selected from the group consisting of anti-inflammatory agents, leukotriene modifiers, bronchodilators, antihistamines, interleukin antagonists, mast cell inhibitors, and Immunotherapeutical agents, in which the active ingredients are present in free form or in the form of a pharmaceutically acceptable salt and optionally at least one pharmaceutically acceptable carrier; for simultaneous, separate or sequential use.

Claim 2. (original) The composition according to claim 1 wherein the anti-IgE antibody and the at least one further antiallergic compound are comprised in a single pharmaceutical formulation.

Claim 3. (previously presented) The composition according to claim 1 wherein the anti-IgE antibody is Omalizumab.

Claim 4. (original) The composition according to claim 3, characterized in that Omalizumab is administered in a concentration dependent on the baseline IgE level of the patient to be treated.

Claim 5. (previously presented) The composition according to claim 1, characterized in that the combination comprises a further monoclonal antibody.

Claim 6. (previously presented) The composition according to claim 1, characterized in that the composition comprises at least one immunotherapeutical agent as the further pharmaceutically active compound.

Claim 7. (original) The composition according to claim 6, characterized in that the immunotherapeutical agent is a macrolide T-cell immunomodulator or immunosuppressant.

Claim 8. (original) The composition according to claim 7, characterized in that the macrolide T-cell immunomodulator or immunosuppressant is a FKBP12-binding calcineurin inhibitor or mitogen-activated kinase modulator or inhibitor.

Claim 9. (original) The composition according to claim 8, characterized in that the FKBP12-binding calcineurin inhibitor or mitogen-activated kinase modulator or inhibitor is an asco- or rapamycin.

Claim 10. (original) The composition according to claim 9, characterized in that the ascomycin is 33-epichloro, 33-desoxyascomycin (pimecrolimus).

Claim 11. (previously presented) The composition according to claim 1, wherein the anti-IgE antibody is Omalizumab and the immunotherapeutical agent is 33-epichloro,33-desoxyascomycin (pimecrolimus).

Claim 12. (previously presented) The composition according to claim 1, wherein the anti-IgE antibody and antiallergic compound are present in respective amounts which are jointly therapeutically effective against allergic disease.

Claim 13. (original) The composition according to claim 12 wherein the anti-IgE antibody and antiallergic compound are present in respective amounts which are jointly therapeutically effective against asthma.

Claim 14. (withdrawn) A method for the prevention, delay of progression or treatment of allergic disease comprising administering to a warm-blooded animal a therapeutically effective amount of a composition according to claim 1.

Claim 15. (withdrawn) A method of treatment of allergic disease comprising administering to a warm-blooded animal a therapeutically effective amount of an anti-IgE antibody and an antiallergic compound.

Claim 16. (withdrawn) A method of treatment of allergic disease according to claim 15, wherein the anti-IgE antibody is Omalizumab.

Claim 17. (withdrawn) A method of treatment of allergic disease according to claim 15, wherein the antiallergic compound comprises an immunotherapeutical agent.

Claim 18. (withdrawn) A method of treatment of allergic disease according to claim 17, wherein the immunotherapeutical agent is a macrolide T-cell immunomodulator or immunosuppressant.

Claim 19. (withdrawn) A method of treatment of allergic disease according to claim 18 wherein the macrolide T-cell immunomodulator or immunosuppressant is a FKBP12-binding calcineurin inhibitor or mitogen-activated kinase modulator or inhibitor.

Claim 20. (withdrawn) A method of treatment of allergic disease according to claim 19 wherein the FKBP12-binding calcineurin inhibitor or mitogen-activated kinase modulator or inhibitor is an asco- or rapamycin.

Claim 21. (withdrawn) A method of treatment of allergic disease according to claim 20 wherein the ascomycin is 33-epichloro,33-desoxyascomycin (pimecrolimus).

Claim 22. (withdrawn) A method of treatment of allergic disease according to claim 15 wherein the anti-IgE antibody is Omalizumab and the immunotherapeutical agent is 33-epichloro,33-desoxyascomycin (pimecrolimus).

Claim 23. (withdrawn) A method of treatment of allergic disease wherein an anti-IgE antibody and an antiallergic compound are co-administered.

Claim 24. (withdrawn) A method of treatment of allergic disease wherein Omalizumab and 33-epichloro,33-desoxyascomycin (pimecrolimus) are co-administered.

Claim 25. (withdrawn) A method of treatment of allergic disease according to claim 23 wherein Omalizumab is administered before 33-epichloro,33-desoxyascomycin (pimecrolimus).

Claims 26-35 (cancelled)

Claim 36. (previously presented) A kit comprising as active agent a composition according to claim 1 together with instructions for simultaneous, separate or sequential use thereof in the prevention, delay of progression or treatment of allergic disease.
